Case studies

Case studies : more than 100 case studies on the deployment of open source software within public administrations

[c.f. 3 réfs sur 119 le 21 octobre 2020 p.j. en dossier]

- New Centres of Knowledge NCKs [Espagne]
- Geo-information and web services ISO 19115 and ISO 19119 [Allemagne]
- CIAF et SIAF Archives nationales. [France] Programme Vitam. Créé le 21/10/2016. 12 réfs. French government IT program for digital archives.

[et ci-dessous]

New Centres of Knowledge. [Espagne, Estremadoure]

Each centre had two employees : a technical person and an outreach person, both of whom designed both programmes and programs for the community attached to the NCK. The mission was to train the population in the use of new technologies, promote local culture, provide a meeting place for residents and to assist local people to find employment. Many projects were initiated on demand by the NCK attendees themselves. The Digital Literacy Plan was commenced in 1999. At the initiation of the Plan there was no precedent and so no experience on which to draw either in the schools, electronic-administration or the technological projects x. The architects were, effectively, pioneers. It was therefore deemed important to document the processes due to interest shown by governments and other organisations.

The New Strategic Plan :

The PP's Information Systems Strategic Plan (2011-2015) is a 100 page document outlining the current Regional Government's roadmap xlvii. It outlines its goals as including more effective responses to public needs and expectations, cost efficiency, improving public services and establishing short, medium and long term plans to achieve these. The language of cost efficiency and the market dominates but it is not clear what factors will be taken into consideration in the calculation of these costs. Throughout the document, an emphasis is placed on conformity with European Directives and European, national and regional strategies. A strong interest in cloud computing is professed.

One of the principal cost inefficiencies identified is in the use of electricity and the need to save costs on licensing is also mentioned. No mention is made of the New Centres of Knowledge. The electronic administration platform is to be totally redesigned, promising a better delivery of public services. New forms of participation and accessibility will be explored, although it is not clear who the target audience is.

News 25-09-2020. France's open data lab launches study into open source and education

Gijs Hillenius. Published on: 25/09/2020.

<https://joinup.ec.europa.eu/user/11119>

Etalab, the French governmental open data lab, has begun a study on the importance of open source software in higher education and research. The study will identify open source use in education, and compare institutional strategies on open data and open access and the sovereignty of education.

Inno³ (pronounced "inno-cube"), a Paris-based consultancy specialising in open data and open source, was involved in the study. Earlier this month Inno asked for respondents to its questionnaire "*Pratiques de*

publication de codes sources au sein de l'Enseignement Supérieur et de la Recherche" ("Publication practices for source code within higher education and research").

The (now closed) survey aimed to create a preliminary overview of open source in higher education and research, including needs and barriers. Respondents were encouraged to include links to projects based on open source. However, such project suggestions are still welcome, says Benjamin Jean, president of Inno³. "This first questionnaire was in French but our goal is to translate it into English to gain international information and a wider context," Mr Jean told the Commission's Open Source Observatory. He and his colleagues are also interested to hear about similar studies and policies developed in other countries on open source and education.

Open source software repositories Joinup

OSS open source software repositories : a collection of repositories with reusable open source software solutions for public administrations.

<https://joinup.ec.europa.eu/collection/open-source-observatory-osor/oss-repositories>

Joinup.

Owner : European Commission

Language : English

Geographical coverage : Worldwide

Joinup is the European Commission's platform promoting interoperability solutions for e-Governments and a collaborative working environment for the development of interoperability. The content consists mainly of Solutions and thematic Collections. The repository of solutions contains the following features: search engine ; open contribution ; regular updates.

Etalab's Public Sector Code

Owner : Etalab. **Language**: French. **Geographical coverage**: France. Developed by Etalab, the repository aggregates open source code published by French government institutions on their platform and helps administrations learn how to correctly implement and reuse it. The repository contains the following features: search engine ; search by public organisations ; regular updates.

Comptoir du Libre de l'Adullact.

Owner : Adullact

Language : French

Geographical coverage : France

Developed by the French non-profit association Adullact, the repository is listing free and open source software that is useful for public services. It contains both publishers and service providers, along with testimonies and rankings of software solutions. The repository contains the following features:

- search engine;
- search by software;
- description of solutions;
- description of use cases;
- information on service providers;
- rating system;
- user feedback available;
- regular updates.
